

GUIDE TO SUBMITTING FILES FOR VEHICLE WRAPS

Highly Preferred File Type: Adobe Illustrator .EPS (Please contact us for other acceptable file formats)

Prepare Text or Line Art (such as logo's) in Vector format and convert all fonts to paths/curves/outlines. (When possible)

We recommend all photography to be at least 50dpi – 100dpi at full size. (Images with a higher resolution is overkill and may result in additional setup fees)

When using images in artwork, be sure to embed all images. (Linked files may result in additional Design cost: \$140/hr)

Add a minimum 6" bleed on Top, Bottom, Left and Right.

You may scale-down artwork to any size however it is extremely important that all files are in proportion. (Please note EXACT final size of graphic when submitting files)

Do not Crop or Cut-Out any part of the graphic. Please submit a solid rectangle for each side (Do-Not clip-path or power-clip wheel-wells, windows or the shape of the vehicle).

Specify critical colors as Pantones; Only pantones will be color matched upon the clients request. Color matching of images (bitmaps) will not be exact and extra costs may be incurred to adjust images. (Extensive color matching WILL incur additional costs)

Merritt Graphics could provide you with a standard vehicle outline template based on Year, Make and Model of your vehicle. (We do not guarantee that measurements are exact; Please measure your vehicle from extreme bumper to bumper length for exact specs)

Be sure to set-up artwork so that the vehicle outline template is on a separate layer from your graphics.

Files can be submitted through our FTP site (contact us for details)
